

FiskeMed

CEO (& potential co-founder)

FiskeMed aims to develop nanobody-based pharmaceuticals to render farmed salmon infertile, preventing two issues in salmon aquaculture (genetic introgression and precocious male puberty).

Benefits of this strategy are enhanced productivity, protection of wild salmon populations, improved animal welfare and economics, and the protection of intellectual property rights.

Responsibilities:

- Setting vision and strategy,
- Managing operations and allocating resources,
- Building and leading the executive team,
- Communicating with stakeholders.

Benefits:

- Remuneration and share ownership in consultation,
- Dynamic and challenging environment,
- Growth potential.
